Controls

- Complaint text is marked as untrusted and screened for manipulation before the AI sees it.
- Document sections with hidden instructions are quarantined and never used as policy evidence.
- Every AI answer is checked for completeness and re-checked against the rules; the AI cannot approve itself.
- Personal data is removed before text is sent to the AI; credentials are never requested; the AI key never reaches the browser.
- Role-based access is enforced on the server for every request; the audit log is tamper-evident and append-only.

Lumora Home Technologies is a fictional organisation; all customers, orders and policies are synthetic demo data.
